(54) PREVENTIVE AGENT FOR RETINOPATHY

(57)Abstract:

PROBLEM TO BE SOLVED: To obtain an ophthalmopathy inhibitor used for prevention or treatment of diseases caused by active oxygen or a free radical in ophthalmologic field and having high safety.

SOLUTION: This preventive agent for retinopathy contains a tea extract as an active component. The extracted component of tea significantly inhibits photodamage to the retina when performing electrophysiological measurement of a retinal function in an evolving system of retinal photodamage using an experimental animal. Since the damage caused by photoirradiation is affected with active oxygen or the free radical, the extracted component of tea can prevent active oxygen or free radical-caused diseases in the ophthalmologic field.

LEGAL STATUS

[Date of request for examination]

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's
decision of rejection]

[Date of requesting appeal against examiner's
